GROWKITT · WHAT'S NEW

Recent upgrades — every key includes them

One license key works on every upgrade, forever. These are the newest additions on top of the 34 tools.

● Total Website Audit

SEO + AEO/GEO + AI visibility combined into ONE score with a severity-ordered issue list. Quick 15-page check up to FULL WEBSITE (10,000 pages on paid plans), 6 pages at a time with live progress — a 500-page site finishes in minutes.

● AI Content Writer

AEO-structured drafts in ~60 seconds for 5 content types: blog, service page, product page, guest post, Web 2.0. Uses your FREE Gemini key, leaves [ADD YOUR NUMBER] markers instead of inventing facts, and scores every draft instantly with Content QC.

● AI Image Studio

3-step design agent: plans the art-director prompt, creates 1-3 variants with your free Gemini key, writes captions + hashtags in English/Telugu/Hindi. Headline text is drawn locally so it is never misspelled. Festival presets + one-click share buttons.

● Fix-It: whole website

Leave the pages box blank and Fix-It crawls the entire site (up to 10,000 pages on paid plans) and writes copy-paste-ready fixes: titles, metas, canonicals, OpenGraph, JSON-LD, robots.txt, llms.txt. Re-run after fixing — solved issues disappear.

● Admin password recovery

Forgot the Team-Mode admin password? Run RESET-PASSWORD.bat on the GrowKitt computer to set a new one or return to no-login mode. Reports and settings are never touched. Local-only by design — it can never be triggered remotely.

● Invoices & Quotations

Client-ready branded PDFs in one minute: auto-numbering, optional GST, discounts, quotation validity, draft/sent/paid tracking, Indian rupee formatting. Agency tier applies your white-label logo automatically. Stored 100% locally.

Which audit tool when?

Total Website Audit = combined executive overview · SEO Audit = one-page deep dive · Bulk Site Audit = per-page AI-readiness table + PDF · Website Fix-It = writes the actual fixes.

34 tools, eight groups, one workflow

Everything below ships in the same app, works in Demo Mode before you add any API key, and respects per-person tab permissions when Team Mode is on.

KEYWORDS & ADS

Keyword Research	answers: what people actually type into Google
Ads Campaign Builder	answers: a ready-to-import Google Ads campaign
Keyword Gap	answers: topics your competitor covers that you don't

AI VISIBILITY

Visibility Scanner	answers: whether ChatGPT, Gemini & Perplexity recommend you
Robots.txt for AI	answers: which AI crawlers may read your site
llms.txt Generator	answers: a site map written for AI engines
AI Overviews Tracker	answers: whether Google's AI answers mention you

SITE HEALTH

Bulk Site Audit	answers: issues across up to 10,000 pages
SEO Audit	answers: a deep single-page technical check
Canonical Checker	answers: duplicate-content traps
Local SEO Check	answers: 9 signals that win 'near me' searches

RANKINGS & LINKS

Rank Tracking	answers: your Google positions over time
Backlinks & Traffic	answers: who links to you, what GSC says
Citations & Prospects	answers: clean directory listings, no spam

CONTENT

Content Brief Generator	answers: writer-ready briefs from real questions
Readability Checker	answers: why AI engines can't quote your page
AEO/GEO Content Audit	answers: 27 pre-publish checks, zero leaks
Content Board	answers: idea to published, tracked in one place
Social Content Generator	answers: posts for 7 platforms from one topic

INTELLIGENCE & TEAM

Competitor Watch	answers: what rivals changed this week
Master Report	answers: everything above in one client PDF
Team Mode & Projects	answers: logins, tab permissions, multi-client workspaces

New in v4.2: three tools that finish the job

Version 4.2 takes GrowKitt from 22 tools to a round 25. Here is what each one does.

SITE HEALTH

Schema.org Generator & Checker

Structured data is how you spell things out for search engines and AI. This tool works in both directions. Paste any URL and it checks the JSON-LD already on the page: scores it, lists what is valid and flags required fields that are missing. Then it generates ready-to-paste schema for 13 types - Organization, LocalBusiness, Product, FAQPage, Article, Service, Event, HowTo, Breadcrumb, Review, WebSite, Video and SoftwareApplication. Fill the short form, copy the script tag, paste it before the closing head tag on your page. Done.

Where: AI Tools -> Schema.org Generator. Available in trial and all plans.

SITE HEALTH

Website Fix-It

Most audit tools stop at 'here is what is wrong'. Fix-It goes the last mile: it crawls your site and, for every problem found, WRITES the fix using your own page content. Missing meta description? It drafts one from the page text. No canonical tag? It gives you the exact line. No OpenGraph? Ready block. No structured data? It picks the right schema type per page - FAQ pages get FAQPage schema built from their own questions, the homepage gets Organization, articles get BlogPosting - and generates the full JSON-LD. Every fix has a Copy button. Site-wide, it also writes your robots.txt and llms.txt if they are missing.

Where: AI Tools -> Website Fix-It. Page limit follows your plan (trial: 20 pages).

RANKINGS & LINKS

Internal Link Optimizer

Orphan pages - pages no other page links to - are invisible to crawlers and AI, no matter how good the content is. This tool crawls your site, maps every internal link, and sorts pages into orphan (no links in), weak (1-2 links) and healthy. For each orphan or weak page it suggests up to three existing pages that should link there, matched by content overlap, with ready anchor text. It also shows your 'power pages' - the most linked pages whose authority you can pass on. Standalone tools charge \$39 a month for this. Here it is one of 25.

Where: AI Tools -> Internal Link Optimizer. Page limit follows your plan.

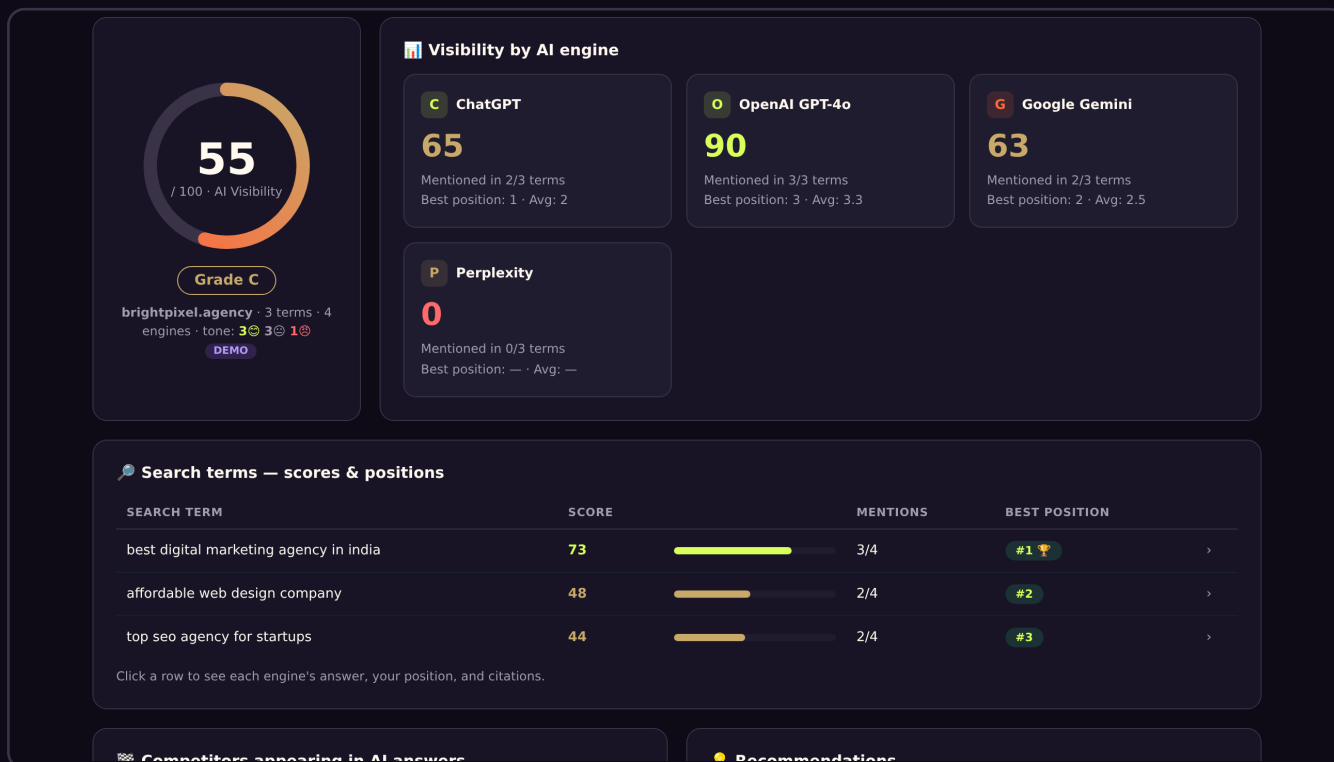

HOW THE THREE WORK TOGETHER

Find. Fix. Verify.

Run Bulk Site Audit to see the damage, Website Fix-It to get every fix written for you, then Internal Link Optimizer to make sure no page is left stranded. Re-run the Visibility Scanner two weeks later and watch the score move. That is the whole loop - find, fix, verify - inside one app.

See yourself the way AI sees you

Type your domain and the questions your buyers ask ('best CRM for a small team', 'top interior designer in Vijayawada'). The Scanner puts those questions to ChatGPT, Gemini and Perplexity, reads every answer, and scores you: mentioned or not, at which position, cited as a source or not, and - since v3.3 - in what tone. One number from 0 to 100 tells you where you stand; the per-term table tells you exactly where you're losing.

Why this matters now

When an AI assistant answers 'who should I hire?', there is no page two. Either you're in the answer or your competitor is. Most businesses have never once checked.

Demo Mode vs Live

Demo Mode generates realistic sample answers so you can learn every screen without keys or cost. Live mode sends real API calls - roughly Rs 2-5 per full scan with your own keys.

What you walk away with

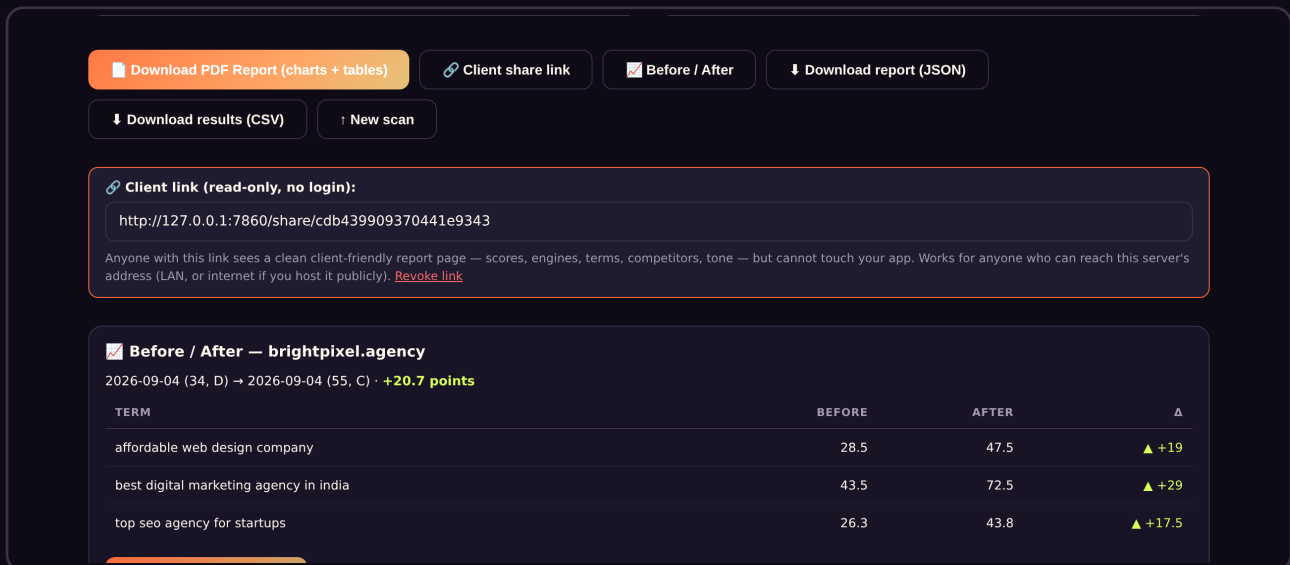

A grade (A+ to F), per-engine scores, per-term positions, the competitors AI recommends instead of you, and a Fix-It tab that turns every weakness into a task.

A real first scan, decoded

Score 55. Mentioned by Gemini, quoted once by ChatGPT, invisible on Perplexity, and a competitor cited twice. That single screen becomes your to-do list: fix the pages Perplexity refuses to cite, add the FAQ answers Gemini rewards, rescan in two weeks and watch the number move.

Built for client work

Four features around the Scanner turn it from a diagnostic into a retention machine for freelancers and agencies.

Answer tone

Every AI answer is labelled Positive, Neutral or Negative around your brand - with the exact sentence that caused a negative. One old review site quietly poisoning your AI reputation? Now you'll see it, and you can fix the source.

Client share links

One click turns a scan into a private, read-only web page. Send the link on WhatsApp; the client sees a clean report, never your app. Revoke any time.

Before / After PDF

Pick two scans of the same site and GrowKitt builds the comparison: score delta, per-term shifts, per-engine changes. This is the page that gets contracts renewed.

Scheduled scans

Set weekly or monthly auto-scans per project. Missed runs fire on next app start; reports can auto-email through your own free Gmail SMTP.

Why clients stay

Clients rarely leave because the work was not done - they leave because they could not SEE it. Share links show the work in real time, Before/After PDFs prove the movement, and scheduled scans make sure the proof arrives even in your busiest week. That is the whole retention playbook, built in.

Honest keyword research

One seed keyword becomes up to 120 real phrases people type into Google, pulled live from Google Autocomplete - free, no key, per country. Each phrase gets a relative demand score and a buyer-intent label. We deliberately do NOT print made-up search volumes: verify exact numbers in Google Keyword Planner (also free) with our CSV export.

Find a tool...

KEYWORDS & ADS

- Keyword Research
- Ads Campaign Builder
- Keyword Gap

AI VISIBILITY

- Robots.txt for AI
- Ims.txt Generator
- AI Overviews Tracker

SITE HEALTH

- Bulk Site Audit
- SEO Audit
- Canonical Checker

Keyword Research

Type one seed keyword — get up to 120 real search phrases people type into Google (via Google Autocomplete, free, no key needed), with relative demand scores, buyer-intent labels and ready question ideas. Honest data: no invented volumes.

SEED KEYWORD: interior design | COUNTRY: India

☒ DEMO MODE (SAMPLE DATA, WORKS OFFLINE)

Find keywords → | Download CSV

20 keywords found | 11 buyer-intent | 4 questions

Score = relative demand from Google Autocomplete (100 = strongest). For exact volumes use Google Keyword Planner (free) with this list.

KEYWORD	DEMAND	INTENT
best interior design	42	commercial
interior design near me	78	informational
interior design price	69	transactional

Intent labels that sell

'interior design price' (transactional) deserves a landing page; 'what is interior design' (informational) deserves a blog post. The label column stops you from writing the wrong content for the right keyword.

Keyword Gap

Point it at your site and a competitor's. It crawls both, extracts the topics each emphasises in titles, headings and descriptions, and lists what they cover that you don't. Every row is your next content idea - feed it straight into the Content Brief tool.

A working Monday-morning routine

1. Type your service into Keyword Research; download the CSV.
2. Paste the transactional phrases into Rank Tracking - now you know where you stand.
3. Run Keyword Gap against your closest rival; pick the 3 easiest gaps.
4. Generate a Content Brief for each gap and drop them on the Content Board.

Total time: about 20 minutes. Repeat weekly and the compounding is real.

A campaign in seconds, not a weekend

Tell it your niche, city and monthly budget. GrowKitt builds the whole Google Ads starter campaign: four ad groups with sensible match types, a negative keyword list that blocks job-seekers and freebie-hunters, fifteen headlines and four descriptions that respect Google's character limits, sitelink suggestions, and a budget plan with click and lead estimates. Export one CSV and import it into Google Ads.

Ads Campaign Builder

Enter your niche, city and monthly budget — get a complete Google Ads starter campaign: 4 ad groups with match types, negative keyword list, 15 headlines + 4 descriptions (character-limit compliant), sitelinks and a budget plan. Export as CSV and import into Google Ads.

YOUR NICHE / SERVICE
interior design

CITY (OPTIONAL BUT RECOMMENDED)
Hyderabad

MONTHLY BUDGET (₹)
15000

YOUR USP (ONE LINE, OPTIONAL)
e.g. 10-day delivery guaranteed

☒ DEMO MODE

Build my campaign | **Google Ads CSV**

Budget plan — Interior Design — Hyderabad

₹493 daily budget | **₹25-90** assumed CPC | **5-19** est. clicks/day | **5-46** est. leads/month

CPC band is an assumption for planning only — verify real CPCs for your keywords in Google Keyword Planner (free) before launching. Lead estimate assumes a 3-8% landing page conversion rate.

Ad groups & keywords

Core — Interior Design
"interior design" · "interior design services" · "interior design company" · "interior design agency" | 4 keywords · phrase match

Local intent — Hyderabad
"interior design in hyderabad" · "interior design near me" · "best interior design in hyderabad" · "interior design hyderabad" · "top" | 5 keywords · phrase match

Honest numbers, again

The CPC band is clearly labelled as a planning assumption by industry - verify your real CPCs in Keyword Planner before spending. Lead estimates state their conversion assumptions. No fantasy ROI graphs.

Who this is for

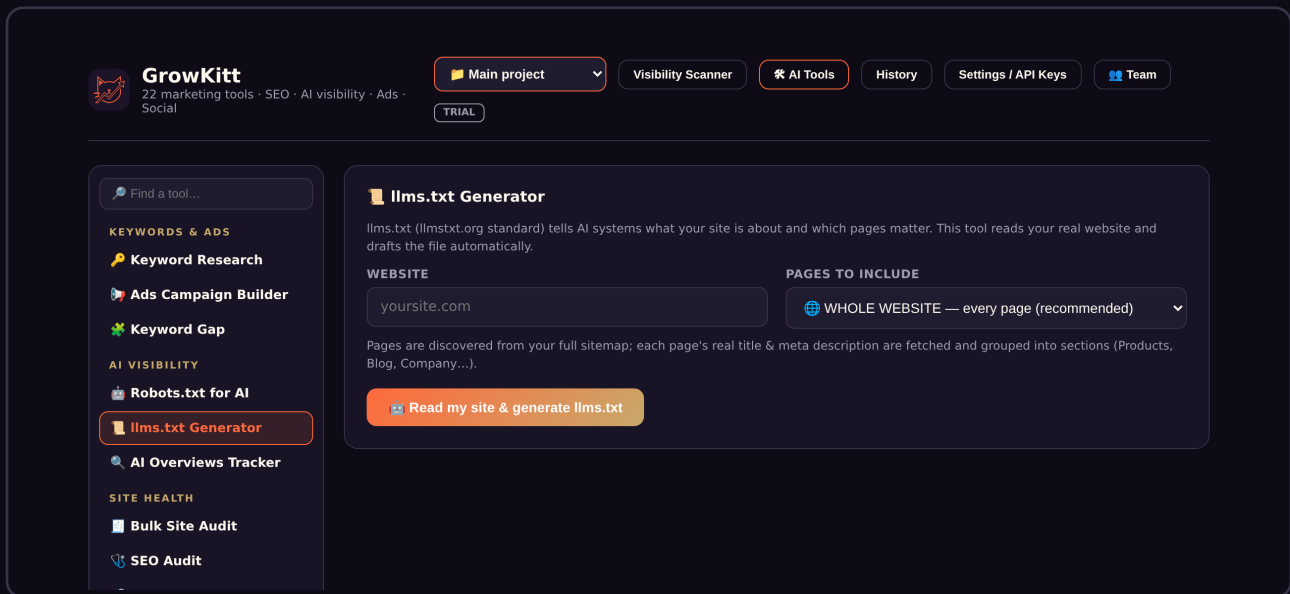

Small businesses running their first campaign without an agency, and freelancers who set up campaigns for clients and want the boring 80% done in ten seconds.

Pays for itself on the first use

Agencies in India routinely charge Rs 5,000 to 15,000 just to SET UP a Google Ads campaign - ad groups, keywords, negatives, copy. GrowKitt does that boring 80% in about ten seconds and hands you a CSV that Google Ads imports as-is. One campaign setup covers the price of the whole app.

Make every page AI-readable

Three tools control how AI systems crawl and understand your site.

Robots.txt for AI

Twelve AI crawlers, each explained in one line, each with an Allow/Block switch. The recommended preset allows search bots (they bring visibility) and blocks pure training bots (they only take). Copy the generated file into your site root - done.

llms.txt Generator

The emerging standard that tells AI engines what your site is about. GrowKitt crawls up to 10,000 pages, groups them into sections and writes the file for you. Most of your competitors have never heard of it - that's the point.

AI Overviews Tracker

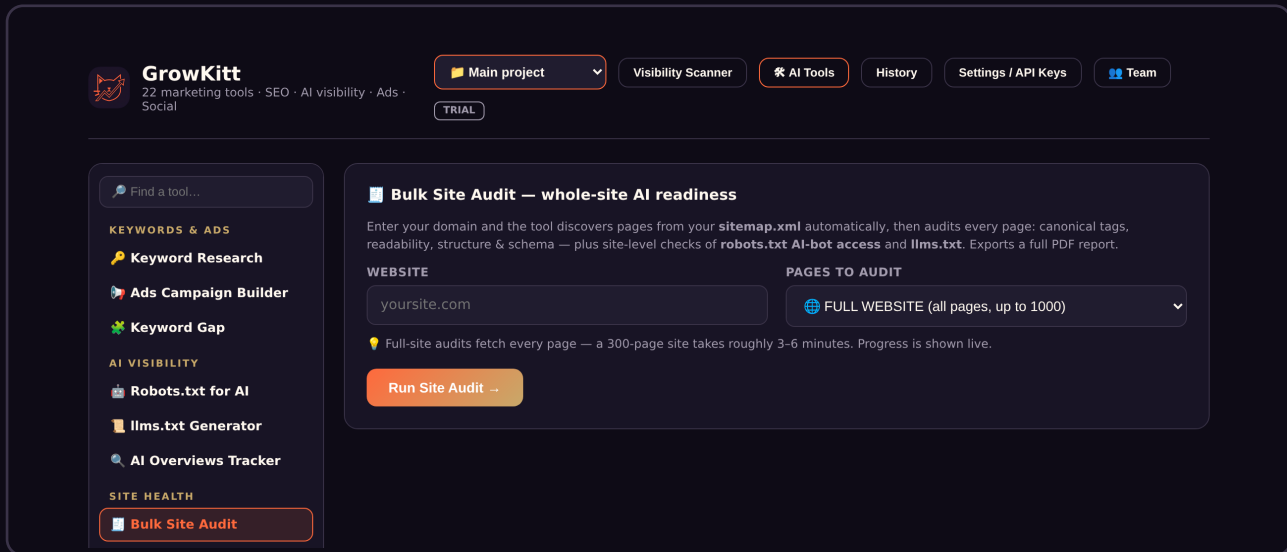

Google now answers many searches with an AI paragraph. This tool checks whether that paragraph mentions you or your rivals, using Gemini's free key with live Google grounding - and tracks it over time.

Do this once, benefit for years

Generate your AI robots.txt - two minutes. Generate llms.txt and upload it to your site root - five minutes. Check AI Overviews for your five money keywords - three minutes. Ten minutes of setup work that most of your competitors have never even heard of.

Find what's broken - all of it

Four checkers, from a 10,000-page sweep down to a single 'near me' page.

Bulk Site Audit

Crawls your whole site - up to 10,000 pages, six parallel workers - and flags missing titles and descriptions, thin content, broken links, missing schema, slow responses and more. Exports a prioritised PDF your developer can work through top to bottom.

SEO Audit

The single-page deep dive: meta, headings, images, links, schema, mobile signals, canonical, OpenGraph - each factor shows what you earned, why, and how to fix it.

Canonical Checker

Catches the silent duplicate-content traps: www vs non-www, http vs https, trailing slashes, self-referencing canonicals that don't match the served URL.

Local SEO Check

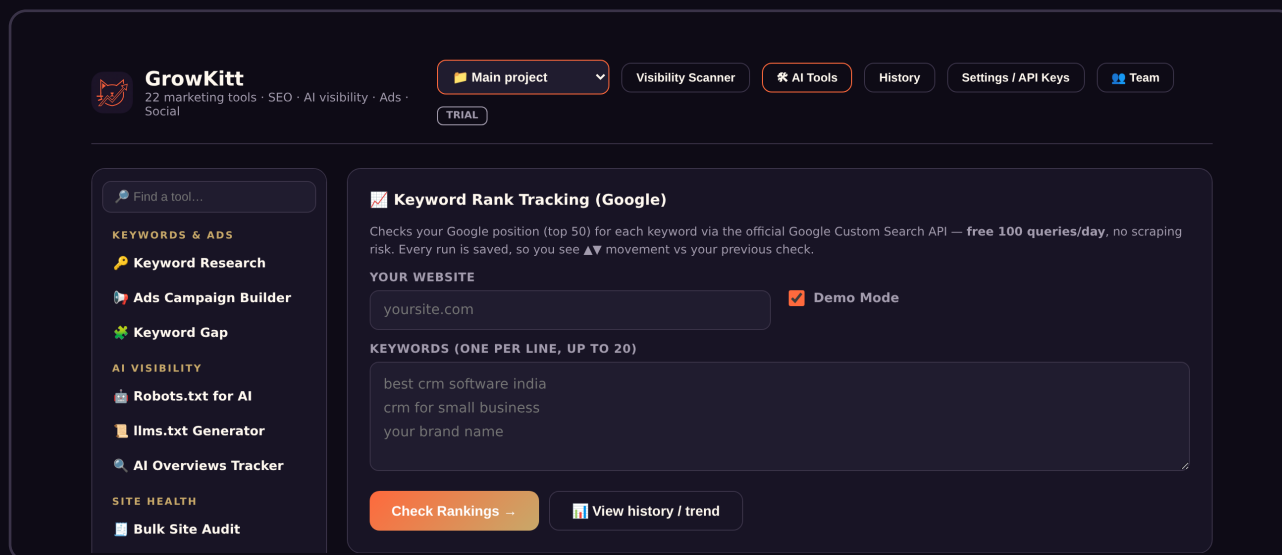

Nine pass/fail checks for local business pages: tap-to-call link, WhatsApp link, LocalBusiness schema, Google Business Profile link, map embed, full address with PIN, opening hours, city in the title and in the copy. Every cross comes with its exact fix.

How to read the audit like a pro

Fix the reds first (broken links, missing titles), then the ambers (thin content, missing schema). Re-crawl after each batch of fixes - watching the error count fall week by week is the cheapest motivation in SEO, and the PDF export keeps your developer honest.

Classic SEO lives here too

AI visibility is the new layer - these three keep the old layer honest.

Rank Tracking

Checks your Google position for each keyword to depth 50, using Google's official Custom Search API (100 free queries a day - enough for daily tracking of a healthy keyword set). History charts show movement per keyword over weeks.

Backlinks & Traffic

Reads your backlink profile and, if you connect the free Google Search Console API, your real clicks and impressions - the numbers Google itself reports, not estimates.

Citations & Prospects

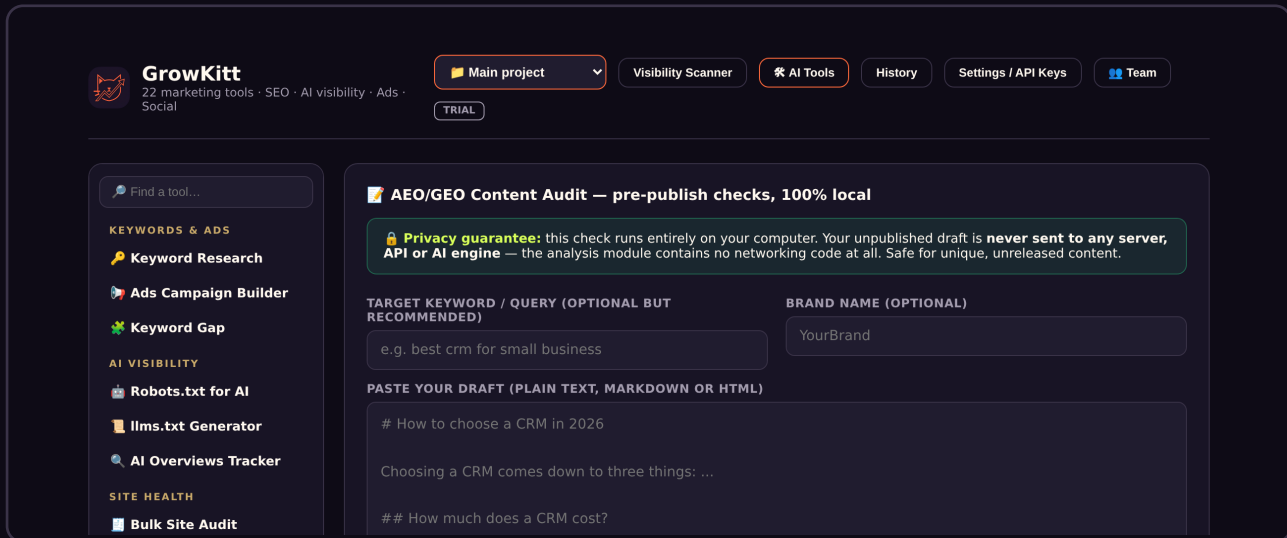

Thirty vetted directories with a submission pipeline: to-do, submitted, live, rejected. Hard limits keep it clean - the tool refuses to be a spam cannon, maximum 20 submissions a day, no bot auto-submission. The Prospects tab finds fresh opportunities when the list runs dry.

Free APIs, real numbers

Everything on this page runs on Google's own free tier: the Custom Search API allows 100 rank checks a day at no cost, and Search Console is free forever. GrowKitt simply organises what Google already tells you - no scraped, guessed or 'estimated' numbers anywhere on this page.

From idea to published, without leaks

The full writing pipeline: brief it, write it, audit it, ship it, track it.

Content Brief Generator

Give it the target keyword; get back the questions real people ask (live from Google), a suggested H1/H2 outline, a target word count, and an AI-era checklist. Hand it to any writer and stop getting drafts that miss the point.

Readability Checker

Flesch score, grade level and AI-friendliness - and unlike most checkers it shows exactly WHERE each point was lost and what change wins it back.

AEO/GEO Content Audit

27 pre-publish checks (18 automated) on unpublished drafts - run 100% locally. Your unreleased content never touches an online tool, so it can't leak or get scraped before launch. Prints a per-article checklist your team signs off.

Content Board

Every article as a row: idea, brief, writing, audit, published. The audit column pulls the checklist score automatically. One glance = pipeline status.

The pipeline in one sentence

Keyword Gap finds the topic, Content Brief shapes it, your writer writes it, the AEO/GEO Audit clears it, the Content Board tracks it, and Rank Tracking proves it worked. One loop, one app, no copy-pasting between five subscriptions.

One topic, seven platforms, two minutes

Type a topic - 'monsoon offer on interior design' - plus your business name, tone and an optional offer. GrowKitt writes ready-to-post content for Instagram, Facebook, LinkedIn, Twitter/X, YouTube Shorts, Threads and WhatsApp Status, each with hashtags and a posting tip. The template engine works instantly with no key at all; add the free Gemini key and it writes fully custom copy in Telugu, Hindi, English or Hinglish.

Instagram Copy

Let's talk about monsoon offer on interior design 🍃

Here's the truth: most people in Vijayawada get monsoon offer on interior design completely wrong — and it costs them customers every single day.

At BrightPixel, we see it up close. The fix is simpler than you think:

Why it's in a marketing suite

Social posts are where most small businesses actually spend their marketing hours. Now the same app that finds your keywords also fills your content calendar - copy button included.

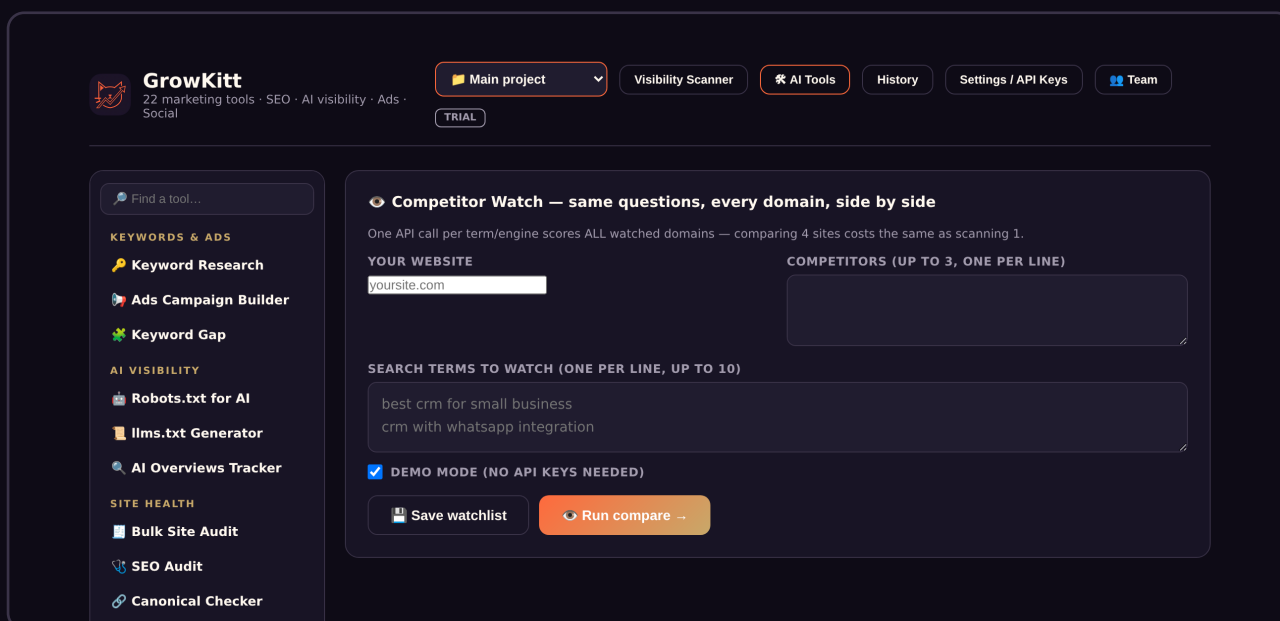

Platform-aware, not copy-paste

Twitter output respects 280 characters. LinkedIn drops the emoji spam. WhatsApp Status uses **bold** markers. Shorts gets a title under 100 characters plus a description. Each platform gets what that platform rewards.

A week of posts in one sitting

Type Monday's topic, generate, copy into your scheduler. Repeat seven times. Most users batch a full week of platform-correct posts in under fifteen minutes - in English, Telugu or Hindi - and the WhatsApp Status version doubles as a broadcast message to your past customers.

Watch rivals. Report like a pro.

Competitor Watch

Add rival domains once. Each check snapshots their titles, headings and content and diffs it against last time: new pages, changed offers, removed services. You'll know about their price change before their own customers do.

Master Report

One click compiles everything - visibility scores, audits, ranks, backlinks, citations, competitor moves - into a single branded PDF. Agency tier replaces GrowKitt branding with your own logo and colours (white-label), so the report your client holds carries your name.

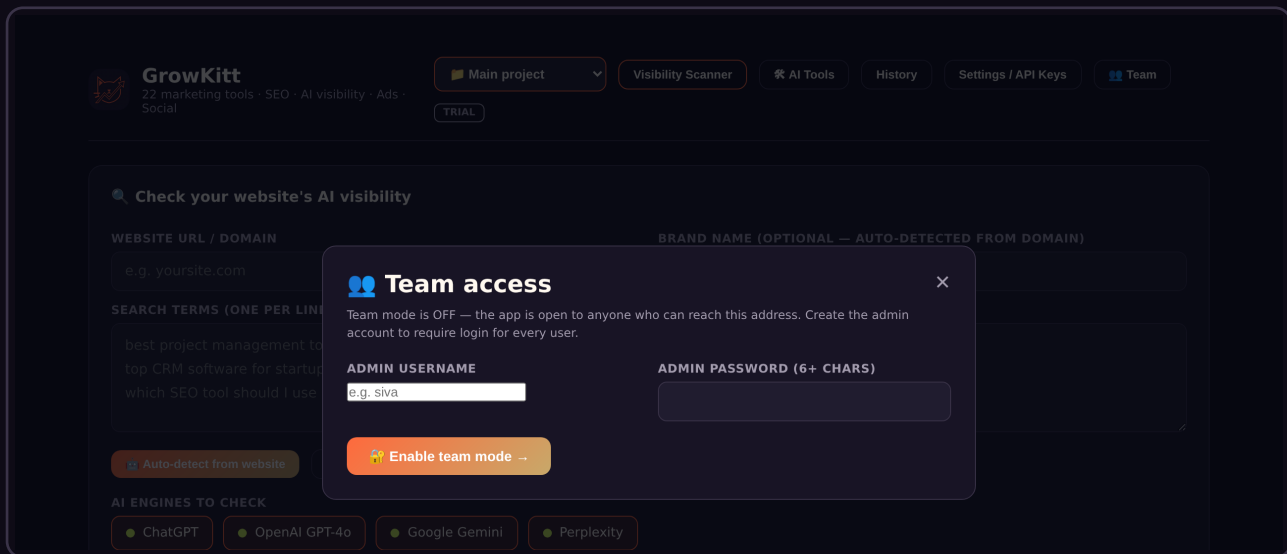

The monthly client ritual (Agency tier)

1. The scheduled scan runs on the 1st; the Before/After PDF shows the month's movement.
2. The Competitor Watch diff shows what rivals changed - ready talking points for your review call.
3. The Master Report compiles everything under YOUR logo. Send it. Renew the retainer. Repeat.

Twenty minutes of work, and the client holds a document no local rival of yours is producing.

Solo today, agency tomorrow

GrowKitt scales from one laptop to a distributed team without changing apps.

Projects

Each client lives in its own workspace - scans, boards, citations, history all separated. Switch from the header dropdown; nothing ever mixes.

Team Mode

Off by default. Turn it on and every teammate gets a login, and you decide per person which tabs they see. The writer sees Content tools; the SEO sees audits; only you see Settings and API keys. Every action lands in an activity log.

Working from different cities

Two built-in ways, both without VPN: free Sync Bundles (each person exports a small project zip, smart merge combines everyone's work record by record) - or host GrowKitt on a Rs 250/month private server and the whole team logs in live at one URL. The included Remote Team Guide walks through the 15-minute setup, and the app ships with noindex headers and a robots.txt block so a hosted dashboard never appears in Google.

Backups

Settings > Backup downloads everything as one zip. Weekly click, sleep well.

Grows with you, priced once

Start solo on one laptop. Hire a writer - give them a login that only sees the Content tools. Land three clients - each becomes its own project with its own history. Nothing to migrate, nothing to re-buy, and no per-seat charges as the team grows.

WHY THIS INSTEAD OF...

The honest comparison

We'd rather tell you the limits ourselves than have you find them after paying.

	GrowKitt	SEMrush / Ahrefs	AI-visibility SaaS
Price	Rs 9,999 once	Rs 11-40k every month	Rs 8-40k every month
Your data	stays on your computer	their cloud	their cloud
AI visibility (ChatGPT etc.)	yes, with tone analysis	partial add-ons	yes
Google Ads campaign builder	yes, CSV import	research only	no
Social content, 7 platforms	yes	scheduling only	no
Search volume database	no - honest scores + free Planner	yes, their moat	no
Traffic estimates of any site	no	yes	no
Team seats	included in tier	Rs 4-8k per seat/month	per seat
Works offline / Demo	yes	no	no

What we don't have, plainly

No billions-of-keywords volume database, no traffic estimates of arbitrary domains, no 40-trillion-link index. Those need the vendor's private crawlers and that's exactly what their monthly fee pays for. Everything else - the day-to-day work that actually moves rankings and sales - GrowKitt covers in one app for one payment, and pairs honestly with Google's own free tools for the exact numbers.

Who should NOT buy this

Enterprise teams doing large-scale link prospecting across thousands of domains. You genuinely need Ahrefs; we'll say so to your face.

The one-line summary

If your work needs trillion-link indexes and volume databases, buy Ahrefs - it is genuinely good at that. If you need everything else - AI visibility, audits, rankings, content, ads and social - for less than ONE month of those subscriptions, that is exactly why GrowKitt exists.

GETTING STARTED

Ten minutes from download to first report

- 1 Install Python (python.org, one download) - or use the included setup guide, it's step-by-step with screenshots.
- 2 Unzip GrowKitt, double-click start. Your browser opens the dashboard at 127.0.0.1:7860.
- 3 Run your first scan in Demo Mode - realistic sample data on every tool during the 7-day trial.
- 4 Add the free Gemini key (takes 2 minutes) when you're ready for live data.
- 5 Enter your license key. Create your first project. That's it - all 34 tools are yours.

Pricing

SOLO	TEAM	AGENCY
Rs 9,999 / \$149	Rs 18,999 / \$279	Rs 34,999 / \$519
1 person - 3 projects - every tool	team logins - unlimited projects - tab permissions	everything + white-label client reports
one-time - 2 years of updates - keeps working forever	one-time - 2 years of updates - keeps working forever	one-time - 2 years of updates - keeps working forever

Do I need to know how to code?

No. Install Python once, double-click start. The setup guide assumes zero technical background.

What if I have no API keys?

Every install includes a 7-day evaluation trial: every tool open in Demo Mode. Live scans, API keys and full limits unlock with a one-time license key.

Is my data private?

Yes - everything runs and stays on your machine. Drafts audited in AEO/GEO Content Audit never go online.

What happens after the update period?

The app keeps working forever. The license expiry only gates free updates.

Can my team use one license?

Team and Agency tiers include team logins with per-tab permissions - no per-seat fees.

One decision, not a subscription

The expensive part of marketing software is not the price - it is paying it again every month whether you used it or not. GrowKitt is a one-time purchase with two years of updates included. Use it daily or monthly; the maths never changes.

GrowKitt

34 tools. One payment. Yours forever.

Try every tool free in Demo Mode before you pay a rupee.
